	Vibration	The power adapter shall withstand forces of 2G at variable recurrent frequencies of 10 to 500Hz and a simulated transportation test. Transportation test will consist of a 1/2G vibration force at the resonant frequencies of the board or components. The test will last for 15 min. The power adapter will be tested in a configuration representative of the intended application with shipping cartons. The power adapter must survive a 50G force for duration of 20ms in all 3 orthogonal planes from normal mounting points.
